

The Industrial vacuums of the Jumbo series are strong, powerful and reliable; therefore they are ideal for continuous and heavy-duty uses. The wide filter area and the great capacity of the container allow the operator to work without any work interruption.

These vacuums are the most requested by the heavy industries and represent the technological standard, thanks to the following features:

Powerful: They are equipped with three phase suction units which don't need any maintenance, thanks to the direct motor / fan coupling so without any transmission. They offer high performance in the recovery of large quantities of heavy material even at a considerable distance.

Safety: The wide star filter surface grants a long operation autonomy; filters are available for hazardous dust, for high temperatures and for very fine dust. The filtershaker, manual or electric, allows to help maintain a constant air flow

Features: Easily removable container thanks to a particular release system. The electric box contains the on-off buttons. The two big rear casters, with brakes and Vulkolan tyres, allow an easy maneuverability of the vacuum.

Customized: Stainless steel are available, different power, size and capacity can be supplied on demand.

		JUMBO-400 CY	JUMBO-800 CY	JUMBO-500 CY	JUMBO-1100 CY
Capacity	m ³ / hr	400	800	500	1100
